

Data Analytics Process

Application in Real Life Scenario Case Study

My Task : Going to a Movie Theatre to watch a Movie

1. Plan:

I will first check in which theatres, what are the Movies broadcasting in my locality.

2. Prepare:

Next I will check how much money I need to spend for watching movie, that is how much it costs to watch in balcony or first class or second class etc.

3. Process:

After that, I will check which are the recently released movies and decide which movie I need to watch. And check the ratings and movie Review

4. Analyze:

Then , I will check other factors which genre I would prefer among all the Movies released recently.

And analyze in which timings of show, I will get the tickets easily.

5. Share:

Next, I will share this data with my friends and family members whom I need to go and watch the movie.

6. Act:

Finally I and My friends or family members go to theatre and watch the movie.
